• T2K long baseline neutrino experiment (Japan)
• Start from April 2009
• Near detector to measure $\nu_\mu$ before oscillation
• $\sim 60,000$ Hamamatsu MPPC will be used
• Mass production started in Feb. 2008
Measurement of Hamamatsu MPPC in mass production for T2K experiment

M. Yokoyama (Kyoto)

- 15,000 MPPCs tested at Kyoto by July 2008
- Test setup developed to measure 64 MPPCs simultaneously
- Can characterize 384 MPPCs / day

Design of the test system and measurement results for >5,000 MPPCs will be presented.
